

Fyndbridge ATS

Consultant User Manual

A practical, non-technical guide to daily recruitment work, attendance, reports, performance review, exceptions, and data quality.

Audience: Consultants

Manual version: 1.0

Repository review date: 18 July 2026

Internal use only

Contents

Use this guide from start to finish for onboarding, or jump directly to the page you are working on. Page names match the left-side menu in the ATS.

Start Here	2
Sign-in, Navigation, and Common Controls	3
Dashboard	5
Mandates	6
Clients and Client Details	8
Candidates	11
Attendance and Leave	14
Report	16
PMS - Performance Review	18
Profile, User Manual, and Other Pages	20
Status and Data Reference	21
Exceptions, Troubleshooting, and Checklists	22

ACCESS NOTE - Your screen can be different

Administrators can control which pages and fields are visible. If a menu item or action in this manual is not on your screen, your access may be intentionally limited. Ask an administrator instead of trying to open the page through an old link.

Scope: This manual covers the consultant experience. Invoice and Admin Panel operations are not included because they are permission-based administrative functions.

CHAPTER 01

Start Here

The shortest route from sign-in to accurate daily work.

Your daily flow

- 1 Sign in**
 Use your Fyndbridge Google account and check that your name appears correctly.
- 2 Check notifications**
 Open the bell for follow-ups, attendance requests, and other action items.
- 3 Review the Dashboard**
 Confirm your current workload, candidate movement, and recent activity.
- 4 Update work as it happens**
 Keep mandate, client, candidate, follow-up, and document details current.
- 5 Record attendance**
 Clock in and clock out on the correct day. Use a correction request if a record needs fixing.
- 6 Review your Report and PMS**
 Use the Report to spot gaps and PMS to complete the required quarterly self-review.

The eight main menu pages

Page	What you use it for
Dashboard	Your current recruitment picture, trends, and recent activity.
Mandates	Create and maintain job mandates, ownership, job descriptions, and mandate status.
Clients	Maintain client, contact, follow-up, contract, and billing information.
Candidates	Add candidates, link them to mandates, upload CVs, and keep pipeline status current.
Attendance	Clock in/out, request corrections, apply for leave, and review balances.
Report	Generate a date-based view of delivery, pipeline, exceptions, attendance, and outcomes.
PMS	Complete quarterly performance inputs and review scores/feedback that are visible to you.
User Manual	Open the latest manual uploaded by a Super Admin.

IMPORTANT - Accuracy beats speed

Reports, dashboards, reminders, and status counts depend on the records entered on these pages. Update the correct client, mandate, consultant, date, and status at the time the work happens.

Before you save any record

- Choose values from dropdown lists when the form provides one. Typed text is not always treated as a valid selection.
- Check that the consultant, client, mandate, role, date, and status belong together.
- Look for an existing person, client, or mandate before creating another record.
- Use clear comments that another consultant or reviewer can understand without extra context.
- Wait for the success message before closing the form or moving to another page.

CHAPTER 02

Sign-in, Navigation, and Common Controls

How to enter the system, move around, find work, and understand actions that appear across pages.

Sign in

1

Open the ATS sign-in page

Choose the Google sign-in option.

2

Use your work account

Only an email ending in @fyndbridge.in is accepted.

3

Wait for access checks

The ATS confirms your session and employment status before opening your first permitted page.

EXCEPTION - Sign-in is blocked

A personal email will be rejected. An inactive account is signed out and shows a message to contact an administrator. If the session has expired, sign in again. If the ATS cannot confirm your employment status, use Retry when offered or contact an administrator.

What stays on every page

- Left menu: open Dashboard, Mandates, Clients, Candidates, Attendance, Report, PMS, or User Manual.
- Top title and breadcrumb: confirm which page you are on.
- Bell icon: open pending notifications and action items.
- Date: shows today's date in the top bar.
- Your initials/name: open Profile Settings.
- Sign out: ends your session and clears your online presence.

Notifications

- Opening a pending notification marks it as read and can take you to the related page.
- Use Mark as Read when no further action is needed.
- Clear All removes notifications that are already read; it does not remove pending items.
- Some reminders also appear briefly as pop-up messages. Hovering over one can keep it visible while you read.

IMPORTANT - On Leave banner

If your employment availability is marked On Leave, the ATS shows a banner and you should not receive new assignments. This is separate from applying for a daily leave request in Attendance. Ask an administrator if the banner is incorrect.

Common table controls

Control	How to use it
Search / filters	Narrow the table to the records you need. Clear filters before deciding that a record is missing.
AI Filter	Describe a field, condition, and value, for example: status is Ongoing. Apply the result, then clear it when finished.
Sort	Choose the sort field and direction. Some tables also let you click a sort button again to reverse the order.
Columns	Choose visible columns, use Proceed to apply, Save Preference to keep the layout, or Reset to return to the default.
Pagination	Change page size or move between pages. A record may be on another page.
Quick status	Click a status cell where enabled, then choose the new status. Confirm the success message.
Open full page	A Dashboard drill-down can open the matching list page while keeping the filter active.

EXCEPTION - AI filter cannot understand the request

Rewrite it with the exact field, condition, and value. If the AI quota notice appears, use the normal filters and try the AI filter later.

System update message

When the ATS says an update is available, choose Reload after saving any open form. Later dismisses the message temporarily, but Reload is recommended so you are working on the latest version.

CHAPTER 03

Dashboard

Use the Dashboard to understand workload and movement before opening individual records.

What the Dashboard shows

- Summary cards for clients, candidates, and mandates.
- Mandate status, candidate status, and client status breakdowns.
- Trends for mandates, candidate movement, and client acquisition.
- Client billing entity summaries and contracts signed.
- Recent clients, candidates, and mandates.
- Online and Away team presence, when available.

Choose the right period

Use the financial-year, quarter, or month controls to select the period you want. Future dates are not counted beyond today. Start with the current month for a daily operational check, then use quarter or financial year for a wider trend.

ACCESS NOTE - Your dashboard or overall dashboard

A regular consultant normally sees their own dashboard. An overall view or consultant selector appears only when access has been granted. Always read the scope label before using a number in a discussion.

Drill into a number

1 Click a card or non-zero status

The page opens a filtered list of the records behind that number.

2 Review the rows

Check the client, mandate, candidate, consultant, date, and current status.

3 Open the full page if needed

The list page keeps the Dashboard filter and displays an active-filter banner.

4 Clear the Dashboard filter

Use Clear dashboard filter when you want the complete list again.

How to read the trends

- A total is useful only with its selected period and consultant scope.
- A status chart shows the saved status at the time the Dashboard loads.
- Recent Activity is a quick route to the latest work; it is not a complete activity log.
- Dashboard figures update as records change. Refresh if you just saved a major change and it has not appeared yet.

EXCEPTION - A count looks wrong

First confirm the period, consultant scope, active Dashboard filter, and status. Open the underlying rows before reporting a mismatch. A blank or dash in a source record can also keep it out of a status count.

CHAPTER 04

Mandates

Create the job correctly, assign the right people, attach the JD, and keep the mandate status current.

What is on the Mandates page

The table can show Job ID, consultant, team lead, client, role, budget, mandate status, sector, allocation date, JD, and actions. Click the role to open the related client details and candidate pipeline.

Add a mandate

1

Choose Add Mandate

The Job ID is generated by the ATS and the allocation date normally starts with today.

2

Select the client

Choose the client from the dropdown. The Client ID fills automatically.

3

Select or add the role

Choose an existing role. If the role is new, choose Add New Role and then type it.

4

Assign ownership

Select one or more active consultants. Do not add the same consultant twice. Choose the team lead from the list if one is required.

5

Complete mandate details

Enter location, budget, sector, allocation date, and mandate status.

6

Attach the JD

PDF, DOC, and DOCX are accepted. Each file can be up to 10 MB, with up to 20 new JD files in one save.

7

Save and verify

Wait for confirmation, then check the new row and its ownership/status.

IMPORTANT - Dropdown selection is required

Client, consultant, and team-lead fields must match an item from the list. Text that only looks correct may still be rejected if it was not selected.

Edit or change status

- Use Edit for detailed changes.
- Use the clickable status cell for a quick change to Ongoing, Completed, or Scrapped.
- Completed means the mandate is closed successfully. Scrapped means it is no longer being pursued.
- A hired candidate automatically completes the linked mandate unless that mandate is already Scrapped.

Duplicate mandate warning

When the same client and role already exist, the ATS compares the new information with the existing mandate. Choose Update Existing when you are correcting the existing job. Choose Add Duplicate only when it is genuinely a separate mandate. Use View More to inspect the existing record before deciding.

EXCEPTION - The record is locked

A consultant cannot edit a locked mandate. Do not create a replacement to work around the lock. Note the Job ID and ask an administrator to unlock or update it.

Mandate checks before you leave the page

- Correct client and role.
- Correct consultant ownership and team lead.
- Correct allocation date and current status.
- JD opens successfully; if it says missing, not found, or needs re-upload, attach a fresh copy.
- No unnecessary duplicate for the same client and role.

CHAPTER 05

Clients and Client Details

Maintain one reliable client record, its contacts, follow-ups, contracts, mandates, and linked candidates.

Clients page

The Clients table contains identity, ownership, contacts, sector, connected date, follow-ups, status, contract details, billing details, documents, and actions. Click the client name to open Client Details.

Add a new client

1

Choose Add Client

The consultant defaults to the current active user when possible.

2

Decide existing or new

Select an existing client from the list, or choose Add New Client. Typing a name is not the same as selecting it.

3

Complete identity and contact

Enter the client name and, where relevant, contact person, mobile, email, designation, LinkedIn, location, region, and sector.

4

Add dates and status

Enter connected date, follow-up date, comments, and the current client status.

5

Complete contract details if signed

Set Contract Signed to Yes and enter terms, value, billing entity, tax details, invoice address, and contract PDF where available.

6

Save and verify

Check the new row, Client ID, contact, consultant, status, and follow-up.

EXCEPTION - The client already exists

Do not create a second client just to store another person. Open the existing client and use Add Contact. If the ATS shows a duplicate comparison, use View More and Update Client when the existing record is the one that should change.

Contacts

- A client can have more than one contact.
- Use Add Contact for a new person at the same client.
- For an additional contact, Contact Person is required and at least one of mobile or email must be entered.
- Email must be valid. A contact that duplicates an existing mobile/email can be rejected.
- You can remove a selected contact only when another contact remains. Read the confirmation before deleting.

Follow-ups

1

Choose Add Follow Up

Select the correct client and enter the date.

2

Add a useful comment

Write the expected action, owner, or outcome so the reminder is meaningful.

3

Save

A client cannot have two follow-ups on the same date.

4

Maintain it

Edit or delete the specific follow-up when the date or action changes.

IMPORTANT - Follow-up reminders

A due follow-up appears on its scheduled date. If a follow-up is moved, update the saved date instead of relying on a separate personal reminder.

Contracts and billing details

- Contract Signed can be Yes or No.
- When Yes, terms can be percentage, fixed fee, slab percentage, or another clearly described arrangement.
- Choose the correct billing entity: FCS or FCAPL.
- Enter GSTIN, PAN, value, and Address on Invoice accurately when available.
- Contract uploads accept PDF only, up to 10 MB per file and up to 20 new files in one save.
- Changing Contract Signed to No clears the related contract attachments. Make sure this is intended.

EXCEPTION - A contract document will not open or remove

Re-upload a clean PDF when the record says the file is missing or not found. If removal fails, retry once; if it still fails, note the Client ID and contact an administrator.

Client status

Where quick status change is enabled, click the status and select the current relationship stage. The available values include Active, Inactive, Converted, Not Converted, Follow Up Required, Not Hiring, Not Adding Consultants, Didn't Pick Up, and dash for not set.

Client Details page

Client Details brings the client's mandates and candidates together. The header shows client status and counts for Ongoing, Completed, and Scrapped mandates.

Mandate summary

- Each mandate shows Job ID, role, JD, mandate status, total candidates, and counts by candidate status.
- Click a role or status count to load the matching candidates below.
- Use the mandate status control to keep Ongoing, Completed, or Scrapped accurate.
- If all mandates are Scrapped, the calculated client status can appear Inactive. If any mandate is Ongoing or Completed, it can appear Active.

Candidate table inside Client Details

- Review candidate identity, ownership, assignment, experience, compensation, status, comments, and documents.
- Use the columns and sort controls to focus the table.
- Edit the candidate or use quick status change where enabled.
- Candidate status is required; dash is not a valid saved candidate status.
- When Hired is selected, enter Offered CTC and Date of Joining. Moving away from Hired clears those hired-only values.

IMPORTANT - Hired changes the mandate

Saving a candidate as Hired automatically changes the linked mandate to Completed, unless that mandate is already Scrapped. Confirm that the candidate is linked to the correct Job ID before saving Hired.

Client Mandate Candidates page

This is a focused, read-only pipeline view for one client and one mandate. Filter by a specific candidate status or use Rejected to combine candidates rejected by the recruiter or the client. Use the Back action to return to Client Details.

EXCEPTION - Client or mandate not found

The record may have been changed, removed, or opened from an old link. Return to Clients, search by Client ID, and open the current mandate from Client Details.

CHAPTER 06

Candidates

Create one candidate identity, link it to the right mandate, maintain status, and verify resume information.

What the Candidates page contains

The table can show Candidate ID, date, consultant, client, Job ID, role, contact information, experience, skills, compensation, notice period, relocation, comments, LinkedIn, status, offer details, joining date, CV, month, and actions.

Find and review a candidate

- Search, filter by mandate, or use the AI Filter.
- Sort by Candidate ID, candidate name, or consultant.
- Open the row or View drawer to see assignments, CVs, LinkedIn, comments, and full details.
- Some rows can expand because one person is linked to more than one client/mandate.
- Clear filters and check other pages before deciding a candidate is missing.

Add a candidate manually

1 Choose Add Candidate

The Candidate ID is generated automatically.

2 Enter the required identity

Full Name and Mobile are required. Add email and LinkedIn where available.

3 Select ownership and assignment

Choose the consultant, client, and mandate from the dropdowns. The role follows the selected mandate.

4 Complete the profile

Add designation, organisation, location, experience, notice period, current/expected CTC, relocation, skills, education, and comments.

5 Choose a valid status

Dash is not accepted. If Hired, also enter Offered CTC and Date of Joining.

6 Attach the CV

PDF, DOC, and DOCX are accepted, up to 10 MB per file. A CV link can also be stored.

7 Save and verify

Confirm the client, Job ID, consultant, status, and CV in the saved record.

IMPORTANT - Client and mandate must be selected

A typed client or mandate name is not enough. Select an item from the dropdown. The mandate list is filtered by client and normally excludes Completed mandates.

Update a candidate

- Use quick status change for a simple pipeline update.
- Use Edit when identity, assignment, experience, compensation, documents, or comments also need to change.
- Do not change mobile or email to match another person's record; the ATS can reject the conflict.
- If a record is locked, note the Candidate ID and ask an administrator instead of creating another candidate.

Assign the same candidate to another mandate

Use Assign Another Mandate/Client from the candidate edit flow. The ATS reuses the same person's profile and links a new assignment, so the history stays together.

- 1 Open the candidate**
Confirm you have the correct person by mobile, email, and existing assignments.
- 2 Choose Assign Another Mandate/Client**
Select the new client and mandate.
- 3 Set the new pipeline status**
Status belongs to the new assignment and is required.
- 4 Save**
Review the expanded row or View drawer to confirm both assignments.

Duplicate candidate message

The ATS checks mobile/email and assignment. If the same person already has the same client and mandate, do not add another copy; use Update Existing. A duplicate can be added only when the client or mandate is genuinely different, and the preferred action is Assign Another Mandate/Client.

EXCEPTION - CV already exists

A resume pre-check can warn that the CV is already in the database. Treat it as a prompt to search for the candidate. The final Save check decides whether the record can be added or should update an existing person.

Bulk resume upload

- 1 Choose Upload Resumes**
Select up to 10 PDF, DOC, or DOCX files in one batch.
- 2 Keep the batch small**
Each file can be up to 10 MB, but keep the combined bulk parsing request at or below about 4.5 MB for reliable processing.
- 3 Wait for parsing**
The ATS extracts information and opens a review. Parsing does not save a candidate.
- 4 Review one resume at a time**
Check every extracted field, especially name, mobile, email, experience, skills, client, mandate, consultant, and status.
- 5 Select required values**
Client, mandate, and a valid status must be chosen before saving.
- 6 Save, skip, or cancel**
Save Candidate stores that reviewed person. Skip this resume moves on without saving it. Cancel Remaining stops the rest after confirmation.

IMPORTANT - Parsing is a draft

Resume extraction can be incomplete or wrong, especially with scans, unusual layouts, tables, or low-quality files. Low-confidence fields may be highlighted. The consultant reviewing the resume is responsible for correcting the draft before Save Candidate.

EXCEPTION - Bulk upload fails

For a file-type error, convert the resume to PDF, DOC, or DOCX. For a size/413 error, reduce the number of files or the combined size. If a temporary parsed file is no longer available, upload that resume again.

Candidate pipeline statuses

Status	Use it when
Interested	The candidate is open to the opportunity.
In Discussion	The consultant and candidate are actively discussing the role.
Not Interested	The candidate has declined interest in this assignment.
Client Submission	The profile has been submitted to the client.
Interview	An interview stage has been reached or scheduled.
Offered	The client has made an offer.
Hired	The candidate has accepted and is recorded as hired. Add Offered CTC and Date of Joining.
Offer Declined	The candidate declined the offer. One summary may display this as Offered Declined.
Dropout	The candidate withdrew after progressing in the process.
Rejected by Recruiter	The profile was stopped internally before client selection.
Rejected by Client	The client rejected the profile.

GOOD PRACTICE - Update status at the event

Change the status when a submission, interview, offer, rejection, or hire happens. Delayed updates make Dashboard and Report results misleading and can create pending-status exceptions.

Candidate quality check

- Identity: name, mobile, and email belong to one person.
- Assignment: client, Job ID, role, and consultant are correct.
- Stage: status reflects the latest real event.
- Commercial information: current CTC, expected CTC, offered CTC, notice period, and joining date are not mixed up.
- Documents: the CV opens and is attached to the correct person.
- Comments: note the latest useful context, not private or irrelevant information.

CHAPTER 07

Attendance and Leave

Record the day correctly, request changes through approval, and use the system's balance preview.

My Attendance

1 Open Attendance

The default consultant view includes My Attendance and My Requests.

2 Check today's status

Review the date, current status, and whether Clock In or Clock Out is available.

3 Clock in once

Clock in when the workday begins.

4 Clock out once

Clock out when the workday ends. Worked time appears after the record updates.

5 Review the calendar

Click a date to see its attendance details and status.

EXCEPTION - Clock action is unavailable

Clock In is blocked on Sunday weekly off, company holidays, and approved leave. A second clock-in or clock-out on the same day is also blocked, and Clock Out requires a Clock In. Use a correction request for a genuine mistake.

Monthly summary

The page can show working days, present days, leave, corrections, unmarked days, holidays, and total hours. Treat Unmarked as a prompt to review the date; do not assume it will fix itself.

Request an attendance correction

1 Choose Request Correction

Select the date that needs fixing.

2 Enter corrected times

The corrected clock-in and clock-out must belong to that date.

3 Review the calculated duration

Confirm the hours match what you are requesting.

4 Explain the reason

A reason is required. Keep it factual and specific.

5 Submit

The request remains Pending until it is reviewed. A pending request can be cancelled.

EXCEPTION - Correction cannot be submitted

Corrections are not available for future dates, Sundays, company holidays, or dates covered by pending/rejected leave. Only one pending correction is allowed for a date. Corrected clock-out must be after corrected clock-in.

What approval changes

- Approved correction: the attendance record is updated with the approved times.
- Rejected correction: the requested change is not applied; review the note and submit again only if new information is available.
- Cancelled correction: no change is applied.
- Use My Requests to see status, reviewer, and review note.

Apply for leave

1

Choose Apply Leave

Select the start and end dates.

2

Choose full or half day

For half-day leave, select first half or second half.

3

Review the preview

The ATS calculates charged days, available balance, projected balance, holidays/weekends, and estimated Loss of Pay (LOP).

4

Add the reason

A clear reason is required.

5

Submit

The request moves to Pending and can be cancelled while pending.

IMPORTANT - Use the preview, not a manual estimate

Leave balance and chargeable days are system-calculated using the financial year, holidays, weekends, pending requests, and applicable rules. The projected balance is the safer number to use before submission.

EXCEPTION - Projected balance is negative

The ATS can allow submission after an extra confirmation, but the excess may be treated as Loss of Pay. Read the warning and LOP estimate before choosing Continue and Submit.

Leave exceptions

- The end date cannot be before the start date.
- A leave request cannot overlap an existing pending or approved leave request.
- Holiday, weekend, and sandwich-rule effects are shown in the preview.
- Only a Pending leave request can be cancelled by the requester.
- Approval or rejection appears in My Requests with the reviewer and note.

Other Attendance tabs

Team Attendance, Approval Centre, Holiday Calendar, and Leave Balances appear only with delegated permission. Consultants with that access should use the filters and review notes carefully. Holiday management, approvals, and balance adjustments are not normal consultant actions unless specifically assigned. If a requested tab is missing, ask for the correct permission; do not use another person's account.

CHAPTER 08

Report

Generate a date-based operational review, understand exceptions, and export the same view to Excel.

Generate your report

1 Open Report

A consultant normally sees only their own name. Other consultants or Overall appear only with granted access.

2 Choose dates

Select From and To. Both are required, From cannot be after To, and the range cannot exceed 367 calendar days.

3 Generate

Future end dates are limited to today. Wait for all report sections to load.

4 Review warnings

Warnings appear at the top when source records have missing, unsupported, or inconsistent values.

5 Export if needed

Export downloads the generated report directly as an Excel workbook.

IMPORTANT - Candidate activity uses the assignment date

A candidate addition is counted when that candidate was linked to a mandate for the selected consultant during the report period. It is not based only on the date the person's master profile was first created.

Mandates tab

- Summary of mandates in the selected period.
- Recent mandates and average conversion timing.
- Conversion and ageing view, including Ongoing mandates older than 45 days.
- View All opens a searchable, sortable list with status filter and pages.

Candidates and Pipeline tab

- Candidate additions by current valid pipeline status.
- Pipeline percentages are based on the candidates included in that report view.
- Records with dash or unsupported status are excluded and can appear in warnings/exceptions.

Attendance and Outcomes tab

- Attendance snapshot and leave balance for your own report when available.
- Positive outcomes such as Hired, Offered, Completed mandates, mandates with a hire, client submissions, and interviews.
- Operational exceptions that point to missing progress or missing data.

Exception checks

Exception	What it means / what to review
Mandates without candidates	No candidate is linked. Confirm sourcing activity and assignment.
Candidates but no Client Submission	Profiles exist, but none are currently saved at Client Submission or a later relevant stage.
Submission but no Interview	At least one profile was submitted, but no Interview is recorded.
All candidates not interested/rejected	Every linked candidate is at a negative outcome. Review next sourcing action.
Ongoing over 45 days	The mandate remains Ongoing after 45 days. Confirm client need and next step.
Pending status assignment	A candidate assignment has dash, blank, or unsupported status and needs correction.

EXCEPTION - Report warning or missing section

Open the underlying Mandate, Client, Candidate, or Attendance record and fix the source value, then generate the report again. If attendance is marked unavailable, retry later or contact an administrator. Export is available only after a report has generated.

CHAPTER 09

PMS - Performance Review

Complete the quarterly self-review carefully and save before changing context.

Choose the correct quarter

Quarter	Months
Q1	April to June
Q2	July to September
Q3	October to December
Q4	January to March

Review categories

Category	Default allocation
Revenue and Mandate Lifecycle Management	60%
Business Development	10%
Business Enablement and Operational Excellence	5%
Interpersonal and Organizational Effectiveness	10%
Process Compliance	15%

Complete your self-review

- Select the quarter**
 A regular consultant sees their own review.
- Check allocation**
 The total allocation across all categories must equal exactly 100%.
- Describe work done**
 Use clear evidence: mandates handled, candidate movement, client work, process contribution, and outcomes.
- Enter self scores**
 Scores use a 0 to 5 scale and may allow one decimal place.
- Review calculated rating**
 The ATS calculates ratings from scores and allocations; calculated fields are read-only.
- Save Changes**
 Use the unsaved-change bar. Confirm the success message before switching quarter or leaving the page.

ACCESS NOTE - Visible and editable columns vary

Consultants can edit only fields enabled for them. SS/NS feedback, RA feedback, scores, or final rating may be visible, hidden, or read-only depending on the review stage and permissions.

Rating guide

Score	Performance description
2.0 or below	Does not meet expectations
Above 2.0 and below 3.0	Partially meets expectations
3.0 to 3.5	Meets expectations
Above 3.5 to 4.0	Good performance
Above 4.0 to below 4.5	Strong performance
4.5 and above	Exceptional performance

Completion indicators

Stage indicators show whether self, SS/NS, and RA score inputs are partial or complete across all five categories. A dot is not a substitute for reading the actual saved values.

EXCEPTION - The review will not save

Check that allocation totals exactly 100%, scores are between 0 and 5, and all required enabled fields are complete. If the Employee Handbook link says it has not been uploaded, ask a Super Admin.

CHAPTER 10

Profile, User Manual, and Other Pages

Keep your personal details current and understand the smaller pages around the main workflow.

Profile Settings

Open Profile Settings by selecting your initials/name in the top bar. You can update Name, Gender, Blood Group, PAN, Mobile Number, and Emergency Mobile Number. Email is read-only.

1

Review your details

Check spelling, mobile numbers, PAN, and emergency information.

2

Make the change

The Save Profile button becomes available when an editable field has changed.

3

Save

Wait for the Profile saved message. Your updated name is used in visible identity and consultant selection/reporting areas.

IMPORTANT - Use your real working name

Your name can appear in assignments, reports, online presence, and audit context. Do not use nicknames or another person's identity unless that is the approved business name.

User Manual page

The User Manual page displays the latest PDF uploaded by a Super Admin. Consultants can read it but cannot replace it. If the page says the manual has not been uploaded yet, ask a Super Admin to upload the approved version.

Settings page

A Settings route exists but is marked Coming Soon and is not part of the main consultant menu. Use Profile Settings for your personal details. Team members, notification rules, integrations, and workspace preferences are not currently configured from the consultant Settings page.

Online presence

The Dashboard can show team members as Online or Away, with their last active time and current page. Signing out normally clears your presence. Presence is a coordination aid, not attendance proof.

IMPORTANT - Presence and attendance are different

Appearing Online does not replace Clock In, and appearing Away does not automatically mark leave or absence. Attendance records come from the Attendance page.

Pages not covered as consultant work

Invoice and Admin Panel appear only with the required administrative access. They contain business controls outside the normal consultant role. If those links appear unexpectedly, do not change records until your responsibility is confirmed.

CHAPTER 11

Status and Data Reference

A quick guide to the values that drive lists, dashboards, notifications, and reports.

Mandate status

Status	Meaning
Ongoing	The role is active and recruitment work continues.
Completed	The mandate is closed successfully. A Hired candidate can set this automatically.
Scrapped	The role is no longer being pursued. A Hired update does not overwrite Scrapped.

Client status

Status	Use it when
Active	The client relationship or mandate activity is active.
Inactive	There is no current active work.
Converted	The business relationship has converted.
Not Converted	The opportunity did not convert.
Follow Up Required	A follow-up action is needed.
Not Hiring	The client is not currently hiring.
Not Adding Consultants	The client is not currently adding consultants.
Didn't Pick Up	The contact did not answer; add a follow-up date/comment.
-	No status has been set. Avoid leaving this when a real status is known.

Attendance request status

Status	Meaning
Pending	Submitted and waiting for review. The requester can cancel it.
Approved	Accepted and applied according to the request type.
Rejected	Not approved. Read the reviewer note before taking another action.
Cancelled	Withdrawn before approval; no requested change is applied.

Values that need special care

- A dash usually means the value is not entered or not assigned. It is not a valid candidate pipeline status.
- Job ID, Client ID, and Candidate ID identify the exact record; include them when asking for help.
- Consultant ownership controls personal lists and reports. Do not select a colleague by mistake.
- Dates control period reports, follow-up reminders, attendance, leave, joining details, and ageing.
- A locked record must be handled by an administrator.

CHAPTER 12

Exceptions, Troubleshooting, and Checklists

What to do when the ATS stops an action, plus routines that prevent most reporting problems.

Common messages and the right response

What you see	What to do
Page/menu item is missing	Your page access may be restricted. Ask an administrator to confirm access.
Record is locked	Note its ID and ask an administrator. Do not create a duplicate workaround.
Duplicate record warning	Open/compare the existing record. Update it unless this is a genuinely different assignment.
Client/consultant/mandate is invalid	Clear the field and select the correct item from the dropdown.
Document missing/not found	Re-upload the correct file to the correct record.
File type or size error	Use the allowed format and reduce the file/batch size.
AI quota reached	Use normal filters and try AI Filter later.
Session expired/unauthorized	Save work if possible, sign in again, and reopen the record.
Account deactivated	Contact an administrator. Repeated sign-in attempts will not restore access.
No data found	Clear filters, check date/scope, search by ID, and confirm the record was saved.
Report warning	Fix the source record, regenerate, then export.
Save failed	Keep the form open, read the exact message, correct the marked field, and retry once.

Document upload limits

Document	Accepted format	Practical limit
JD	PDF, DOC, DOCX	Up to 10 MB per file; up to 20 new files in one mandate save.
Candidate CV	PDF, DOC, DOCX	Up to 10 MB per file; attach to the correct candidate.
Bulk resume parsing	PDF, DOC, DOCX	Up to 10 files; keep the combined request about 4.5 MB or less.
Client contract	PDF only	Up to 10 MB per file; up to 20 new files in one client save.
Employee Handbook	PDF	Uploaded by a Super Admin; consultants read it from PMS.
User Manual	PDF	Uploaded by a Super Admin; consultants read it from User Manual.

Daily checklist

- Check the notification bell and due follow-ups.
- Review your Dashboard scope and active work.
- Clock in once at the start and clock out once at the end.
- Update candidate status after every meaningful pipeline event.
- Update mandate/client status when the real situation changes.
- Save clear follow-up comments and dates.
- Confirm any newly uploaded JD, CV, or contract opens.
- Resolve or report locked, missing, or duplicate records instead of working around them.

Weekly checklist

- Generate your Report for the week or month-to-date.
- Review mandates without candidates and Ongoing mandates over 45 days.
- Review candidates pending a valid status.
- Check client submissions that have not moved to interview.
- Review Unmarked attendance days and pending requests.
- Confirm follow-ups for the coming week.
- Check that PMS work notes and self-scores are saved during the active quarter.

What to include when asking for help

- Page name.
- Job ID, Client ID, Candidate ID, or request date.
- The action you were taking.
- The exact message shown.
- Whether the record is locked, duplicated, or missing a document.
- A screenshot that does not expose unnecessary personal information.

GOOD PRACTICE - Keep the audit trail useful

Correct the existing record whenever possible. Creating replacement records to avoid a warning breaks history, ownership, dashboards, and reports.

Final rule of thumb

If an action changes ownership, status, dates, a contract, attendance, leave, or a hire outcome, pause and verify the exact record before saving. Those fields have the widest effect across the ATS.
